**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

For at least claim 1,

1) the limitation of “N is less than four” that is being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

2) the limitation of “screening the N spot color separations, wherein at least one of the N spot color separations is screened using frequency modulation (FM)” that is being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention because the method of “screening” or “screened” are not clearly specified for what in the N spot separations.

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-30 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described

in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The limitation of “N is less than four” should be understood that N may be equal one or two or three. However, the specification of the current application does not describe N spot color separations comprising one or two.
